

Desired Courses

Courses I am Applying for

Diskret matematik og algoritmer (DMA)

Advanced programming (AP)

Advanced algorithms and data structures (AADS)

Modellering af analyse af data (MAD)

Reasons

I would love to work on Discrete mathematics – that was one of my favorite undergrad courses. I have also TA'd for Advanced Programming before, and while I struggle somewhat with the Haskell side of things, I feel that I am quite sufficient at solving Erlang and Prolog. AADS is also quite enjoyable, and I am currently TA'ing for that course. Finally, MAD is very similar to dataanalyse, which I am currently TA'ing.

I live in Odense, and while this sometimes presents a hurdle for short-notice meetings, generally everything works out. I am also willing to take a disproportionately large part of both grading and discussion forum monitoring in exchange for exercise sessions, if there are additional available part-time students eager to gain teaching experience.

I will also be writing my thesis during this time. I am comfortable with taking one class a block, and potentially more in block 1, since that will be data-gathering and idea-forming.
