

As an engineer on the Global Technical Team, I deliver training and proactive services worldwide to help Microsoft enterprise customers plan, implement, maintain and optimize their solutions within the Apps and Infrastructure domain.

I also do Software Development (mostly .NET Software Architecture for new solutions like API, Blazor, Mobile, AI/Automation services), Azure infrastructure and Build/Code Migration Tools.

With more than a decade as a Developer, Trainer and Software Architect I have built business critical solutions that have been consumed by millions.

Furthermore, I have great interest in new technologies and coding languages where I easily adapt to new trends and ways of building software.

Some of the **companies** I have been working with:

Countries I am engaging with **onsite** (and **remotely +25 countries**):

Ali Reza Farahnak

Microsoft Global Technical Team  

Sr. Customer Engineer – Microsoft Certified Trainer – Certified Developer - Advisor
